                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      08-NOV-2000;
08-NOV-2000;
08-NOV-2000;
08-NOV-2000;
            The invention relates to novel isolated polypeptides (I), and polynucleotides (II). (II) and the antibody to (I) are useful for diagnosing, preventing and treating diseases including immune system disorders (e.g. congenital and acquired immunodeficiencies, autoimmune disorders (e.g. rheumatoid arthritis), inflammatory conditions, organ transplant rejections and graft versus host disease, infectious diseases (e.g. hepatitis C), bleeding disorders, haemoglobin abnormalities and other blood-related disorders (sickle cell anaemia), myeloproliferative disorders, primary haematopoietic disorders, hyperproliferative disorders (e.g. Gaucher's disease, Parkinson's disease), chromosomal abnormalities (Down syndrome), ischaemic injury (e.g. stroke), renal disorders (e.g.
                                                                                                                                                                                                                                                                                                           Novel polypeptides useful for diagnosing, treating, prevprognosing disorders related to the proteins, including disorders and neuronal disorders.
                                                                                                                                                                                                                                                                                                                                                                                              WPI;
(Down syndrome), ischaemic injury (e.g. stroke), renal disorders glomerulonephritis), cardiovascular disorders (e.g. arrhythmia),
                                                                                                                                                                                                                                                                          Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                     Rosen

                                                                                                                                                                           amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic cactivity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by recifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the curleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, cancers and treat immune/haematopoietic-derived cells. AAK64703 cc cancers and cancer metastases of haematopoietic antigen genomic to AAK647694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 crepresent sequences used in the exemplification of the present invention
                                                                        Query Match

(I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, cancers and cancer metastases of haematopoietic-derived cells. AAK64703

```
useful for diagnosing a pathological condition or a susceptibility to a pathological condition in a subject, by determining the presence or amount of expression of the polypeptide in a biological sample and diagnosing a pathological condition or a susceptibility to a pathological condition or a susceptibility to a pathological condition based on the presence or amount of expression of the polypeptide. The polypeptide is also useful for identifying a binding partner to the polypeptide, which involves contacting the polypeptide with a binding partner and determining whether the binding partner effects an activity of the polypeptide. The polypeptide or the mucleic acid encoding the polypeptide is useful for preventing, treating, or ameliorating a medical condition, which involves administration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        11-JUL-2000

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cc polypeptide or the nucleic acid to a mammalian subject. The nucleic acid ci suseful for diagnosing a pathological condition or a susceptibility to a pathological condition in a subject, which involves determining the cc presence or absence of a mutation in The nucleic acid, and diagnosing a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition compatible of the mutation. The polypeptide, the nucleic acid and an antibody to the polypeptide are useful for treating cc autoimmune disease, Parkinson's disease, silicosis, gastrointestinal cc disease, atherosclerosis, haemophilia, thrombocytopenia. The polypeptide, the nucleic acid and the antibody are useful as immunosuppressive agents, cc as adjuvants to enhance immune responses, and as agents to induce higher cc affinity antibodies and increase serum immunoslobulin concentrations. The presents DNA encoding a novel human protein. Note: The sequence data for this patent did not form part of the printed concentrations at the sequence represents DNA encoding a novel human protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      sequence at least 90% identical to: a polypeptide fragment, domain, epitope, or full-length protein of any one of 607 amino acid sequences (I) described in the specification; a polypeptide fragment of (I), or the encoded sequence contained in (II), having biological activity; or a variant, allelic variant, or a species homologue of (I). The polypeptides and nucleic acid molecules are useful for detecting, preventing, diagnosing, prognosticating, treating or ameliorating medical conditions such as neural disorders, e.g. Alaheimer's disease, Parkinson's disease, Huntington's chorea, amyotrophic lateral sclerosis or multiple sclerosis, immune system disorders, e.g. diabetes, rheumatoid arthritis, systemic lupus erythematosus, autoimmune thyroiditis or haemolytic anaemia,
The invention relates to an isolated polymucleotide comprising any one o 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding t a reading frame of the novel polymucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (EST) for identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New polynucleotide sequences obtained as hybridization probes, as oligomers mapping, in the recombinant production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                genome
                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1;

                         length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises a 1'-end sequence, where the oligonucleotide comprises a 1'-end sequence and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are are also useful for the sparticularly full-length cDNAs. The primers are are also useful for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           is useful for generating antibodies specific for it. is one of the 38043 isolated cDNA/SST sequences. Note for this patent did not form part of the printed specobtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Primer sets for synthesizing polynucleotides, length cDNAs defined in the specification, an diagnosis of the abnormality of the proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2001-318749/34.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                28-JUL-2000; 2000EP-00116126.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        EP1074617-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                26-JUN-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 132
                  The invention relates to a detection reagent capable of detecting one or compared much in the single nucleic acid polymorphisms. The invention also relates to compare single nucleic acid polymorphisms. The invention also relates to compare the sub-region, a trait is linked to one of the human chromosomes or its sub-region, a computer readable medium having stored in it the SNP conclude for detecting at least one SNP given in the specification and isolated nucleic acid molecule for detecting at least one SNP given in the specification comprising at least about 12 contiguous nucleotides, genotyping at least one Contribution in a sample, identifying an individual having or at risk of developing a disorder and a kit comprising at least one container containing the detection reagent. Determining whether a trait is linked to one of the human chromosomes or containing whether the trait is linked to one correctly the detection reagents. Genotyping at least one SNP position given in the specification in a sample comprises contacting the sample with a detection reagent that differentiates between alternative alleger at the least one contacting the sample with a detection reagent that differentiates between alternative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Best Loc

Identifying an individual having or at risk of developing a disorder comprises genotyping at least one SNP given in the specification in a nucleic acid sample from the individual. The disorder is type II diabetes (non-insulin dependent diabetes) or obesity. The detection reagent is useful in identifying an individual having or at risk of developing a disorder, particularly type II diabetes or obesity. This sequence represents a human DNA polymorphic region used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from

                                                                                                                                                         CC amino acid sequences given in AAM82170 to AAM9121. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) concert and be used to produce the secreted (I), by inserting the culled acids into a host cell and culturing the cell to express the culeic acids into a host cell and culturing the cell to express the concert and treat immune/haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 crepresent sequences used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             amino acid sequences given in AAMS2170 to AAMS1921. (1) have cytostatic contivity, and can be used in gene therapy and vaccine production. (1) cytostatic proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (1) expression. For cytostample, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (1) by expressing inactive proteins or to supplement the patients own production of (1). Additionally, (1) polynucleotides may be used to produce the secreted (1), by inserting the culties caids into a host cell and culturing the cell to express the protein. (1) proteins and polynucleotides may be used to prevent, classing and cancer metastases of haematopoietic-derived cells. AAK64703 coancers and cancer metastases of haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 crepresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC amino acid sequences given in AAM82170 to AAM891921. (1) have cytostatic contivity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to produce the secreted (I), by inserting the culcic acids into a host cell and culturing the cell to express the CC protein. (I) proteins and polynucleotides may be used to prevent, CC diagnose and treat immune/haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703 CC to AAK87694 represent human immune/haematopoietic antigen genomic CC sequences from the present invention. AAK54950 and AAM82169 CC sequences from the present invention. AAK54950 and AAM82169 CC sequences received cells to protein the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Best Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic cactivity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For cexample, they may be used to treat disorders associated with decreased cexpression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) collynucleotides may be used to produce the secreted (I), by inserting the culleic acids into a host cell and culturing the cell to express the collagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic acids encert encert immune/haematopoietic acids encert encert immune/haematopoietic acids encert encert immune/haematopoietic acids encert encert immune/haematopoietic acids encert encert encert encert immune/haematopoietic encert encer

                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                        CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic cc activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For c example, they may be used to treat disporders associated with decreased cc expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the cc nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, cd diagnose and treat immune/haematopoietic-derived cells. AAK64703 c cancers and cancer metastases of haematopoietic antigen genomic cancers from the present inwune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 crepresent sequences used in the exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                to and modulate expression of the CDNA molecules. As such, these molecules are useful for diagnostic markers or therapeutic targets for the various diseases or morbid states. In particular, they are useful in gene therapy for treating osteoporosis, neurological disease, Alzheimer's disease, Parkinson's disease, dementia, short memory and various cancers, as well as for maintaining equilibrium of sense or motor function, and for treating emotional reaction, fear response and panic. Accordingly, they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian, cytostatic and tranquiliser activities. This polymucleotide is a full length human cDNA sequence of the invention. NOTE: This sequence is not given in the sequence listing of the specification but can be obtained on CD-ROM from the European Patent Office, Vienna Sub-office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention relates to novel, isolated full length human cDNA molecules and the encoded proteins thereof. Specifically, it refers to molecules and the encoded proteins thereof. Specifically, it refers to molecules and obtained by an oligo-capping method, where none of these clones are identical to any known human mRNAs. The present invention describes an immunoassay to identify agonists and antagonists, as well antibodies, antisense molecules and siRNAs that can all be used to bind antibodies, antisense molecules and siRNAs that can all be used to bind
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; SEQ ID
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New 1995 cDNA, useful for treating osteoporosis, neurological diseases, Alzheimer's diseases, Parkinson's diseases, dementia and various cancers.

                                                                                                                                                                                   S
                                                                                                                                                                                                                                                                                                         length cDNAs defined in the specification. Where a primer set comprises:

((a) an oligo-dr primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 complementary strand of a polynucleotide which comprises one of the 5602 coligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end complementary to a polynucleotide which comprises a 3'-end sequence complementary to a golynucleotide which comprises a 3'-end sequence complementary to a coligonucleotide which comprises a 3'-end sequence, where the coligonucleotide which comprises at least 15 nucleotides and the combination of the 5'-end sequence) are sets can be used in antisense therapy and in the specification. The primers are useful for synthesising polynucleotides, comparisons the primers are also useful for the sparticularly full-length cDNAs. The primers are also useful for the comprise comparisons the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assity without any specialised methods. AAH03166 to AAH13628 and CC DNAs easily without any specialised methods. AAH03165 to AAH13628 and CC DNAS easily without any specialised methods.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) antino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) croteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) concleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynuclootides may be used to prevent. (C diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metasteses of haematopoietic artigen genomic concers and treat immune/haematopoietic artigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 crepresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                                   The present invention provides the protein and coding sequences of number of human reproductive system related antigens. These can hin the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoprotein of the invention
                                                                                                                                                                                                        Isolated

These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention

The sequences can be used in the treatment of cardiovascular, uninary system, reproductive system, immune, respiratory, neurological and gastrointestinal disorders, infections, and particularly cancer, especially testicular cancers. The present sequence is a DNA encoding a

                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                             CC (Amp). This protein is used to produce recombinant Amp and can be used CC (Amp). This protein is used to produce recombinant Amp and can be used CC for gene therapy for treating Amp-deficiency conditions. Its fragments CC are used as primers and probes to identify patients with homozygous and heterozygous Amp deficiency, including prenatal diagnosis (patients CC defective in Amp are at risk of developing angioedema if treated with CC angiotensin-converting enzyme inhibitors), also as antisense inhibitors CC in cases of excessive Amp expressing sequences in other animals and to generate transgenic animals, and comparisons of genomic sequences are used to detect mutations. Amp inhibitors are potentially useful as antihypertensive agents and to prevent or treat arterial (re)stensis or atherosclerosis. The structure of Amp is used to design synthetic substrates, e.g. for use in Amp assays. Amp, which hydrolyzes N-terminal indo bonds, can be used to degrade industrial protein feeds to free formulations used to treat malabsorption syndrome and for studying its biological role. Antibodies against Amp are used in immunohistochemical
                                                                                                                                                                                                                                    Query Match

                            cardiac arrest, cerebrovascular disorders such as cerebral ischaemia, nervous system disorders such as Alzheimer's disease, infections caused by bacteria, viruses and fungi, ocular disorders such as corneal infection, endocrine disorders such as premature labour and infertility, gastrointestinal disorders such as crohn's disease, renal disorders such as glomerulomephritis and respiratory disorders such as asthma and pleurisy. The polypeptides can also be used to aid wound healing, to prevent skin aging due to sumburn, to maintain organs before transplantation, to regenerate tissues and in chemotaxis. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                  disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by detecting the presence or absence of a mutation in a cardiovascular system antigen polynucleotide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, hyperproliferative disorders such as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cerebral ischaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequences AAS35741-AAS36942 represent genomic DNA molecules, which encounthe cardiovascular system antigen polypeptides of the invention. Cardiovascular system antigens and their associated polynucleotides are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New cardiovascular system related polynucleotides and polypeptides, useful for diagnosing, treating and/or preventing disorders of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cardiovascular system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Rosen

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC AAKS4951 to AAK64702 encode the human immune/haematopoietic antigen (I) CC amino acid sequences given in AAW82170 to AAW91921. (I) have cytostatic CC activity, and can be used in gene therapy and vaccine production. (I) CC proteins and polymucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to Supplement the patients own production of (I). Additionally, (I) CC supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to proved the secreted (I), by inserting the CC nucleic acids into a host cell and culturing the cell to express the CC diagnose and treat immune/haematopoietic-derived cells. AAK64703 CC cancers and cancer metastases of haematopoietic antigen genomic CC sequences from the present invention. AAK54942 to AAK8769 and AAW82169
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                   The invention relates to human cardiovascular system related polypeptides and the polynucleotides encoding them. The polypeptides, polynucleotides and antibodies to the polypeptides are useful for diagnosing a pathological condition or a susceptibility to a pathological condition, for preventing, treating, or ameliorating a medical condition, such as cancer of cardiovascular system tissues, proliferative disorders, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid the immune system, AIDS, autoimmune diseases (e.g., rheumatoid
                                                                                                                                                                                                                                                                              New cardiovascular system related polynucleotides and polypeptides, useful for preventing, treating, or ameliorating a medical condition, such as cancer of cardiovascular tissues and cancer metastases.

The invention relates to an isolated nucleic acid molecule encoding a CC human cardiovascular system associated polypeptide (or antigens), or its C fragment. Also included recombinant vectors, recombinant host cells, an CC isolated human cardiovascular system associated polypeptide (including CC its fragment, allelic variant, species homologue or epitope), an isolated CC antibody that binds specifically to a human cardiovascular system CC susceptibility to a pathological condition or CC susceptibility to a pathological condition comprising determining the CC presence or absence of a mutation in human cardiovascular system CC associated nucleic acid and diagnosing a condition based on the presence or absence of the mutation), identifying a binding partner to human CC cardiovascular system associated polypeptides, the gene corresponding to the human cardiovascular system associated polypeptides, the gene corresponding CC an activity in a biological assay comprising expressing the human CC cardiovascular system associated cDNA in a cell, isolating the cardiovascular system associated cDNA in a cell, isolating the corresponding to condition the supernatant, detecting an activity in a biological assay and identifying cardiovascular system associated cDNA in a cell, isolating the cardiovascular system associated nucleic acids and polypeptides are used the prevent, treat or ameliorate a medical condition (for example in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            08-NOV-2000

Sequences AAS35741-AAS36942 represent genomic DNA molecules, which encode CC the cardiovascular system antigen polypeptides of the invention. CC Cardiovascular system antigen and their associated polynucleotides are useful in the diagnosis, treatment and prevention of various types of CC disorders in e.g. humans, mice, rabbite, goats, horses, cats, dogs, CC chickens or she pathological condition can be determined by CC detecting the presence or absence of a mutation in a cardiovascular System antigen polynucleotide. The treatable disorders include autoimmune CC diseases such as rheumatoid arthritis, hyperproliferative disorders such as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cerebral ischaemia, CC cardiac arrest, cerebrovascular disorders such as cerebral ischaemia, CC cardiac arrest, viruses and fungi, ocular disorders such as corneal correctoria, viruses and fungi, ocular disorders such as corneal correctoria, endocrine disorders such as premature labour and infertility, C gastrointestinal disorders such as premature labour and infertility, C gastrointestinal disorders such as Crohn's disease, renal disorders such as glomerulonephritis and respiratory disorders such as asthma and CC gastrointestinal disorders such as Crohn's disease, renal disorders such cas glomerulonephritis and respiratory disorders such seath and the printed sequence data for this patent did not form part of the printed CC sequence data for this patent did not form aart of the printed CC sequence data for this patent did not form aart of the printed CC at fitp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        17-NOV-2000

                                                                                                                                                                                                                                                                                                                                                   맑
                                                                                                                                                                                                                                δ
                                                                                                                                                                                                                                                                                                                                                                               The invention relates to novel genes (ABA11004-ABA21534) and proteins CC (ABB14678-ABB18001) useful for preventing, treating or ameliorating comedical conditions e.g. by protein or gene therapy. The genes are CC isolated from a range of human tissues disclosed in the specification. CC The nucleic acids, proteins, antibodies and (ant) agonists are useful in CC the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and CC ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, CC breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune CC disorders e.g. Addison's disease, allergies autoimmune haemolytic CC anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) CC cardiovascular disorders such as myocardial ischaemias; (d) wound healing CC infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid molecule encoding a CC fumman cardiovascular system associated polypeptide (or antigens), or its CC fragment. Also included recombinant vectors, recombinant host cells, an CC isolated human cardiovascular system associated polypeptide (including its fragment, allelic variant, species homologue or epitope), an isolated CC antibody that binds specifically to a human cardiovascular system CC associated polypeptide, diagnosing a pathological condition or CC susceptibility to a pathological condition or CC susceptibility to a pathological condition based on the presence CC presence or absence of a mutation), identifying a binding partner to human CC cardiovascular system associated polypeptides, the gene corresponding to CC che human cardiovascular system associated cDNA sequence and identifying CC an activity in a biological assay comprising expressing the human CC cardiovascular system associated cDNA in a cell, isolating the corresponding to CC the protein in the supernatant having the activity. The human CC cardiovascular system associated mucleic acids and polypeptides are used to prevent, treat or ameliorate a medical condition (for example in CC humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep), for cxample autoinmune diseases such as theumacoid arthritis, chyperproliferative disorders, for example neoplasms of the breast or liver, cardiovascular disorders, for example cardiac arrest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of bioactive agent capable of modulating the activity of CAP; (iv) for a bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vii) for inhibiting the activity of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent US2002182586A1, for which no sequence data was published
The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bloactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 1; SEQ ID NO 1936; Opp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            뭉
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                       CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.

CC rhe invention also relates to a peptide array comprising two or more solution also relates to a peptide array comprising two or more composed by a CA nucleic acid sequence, a compound composed that binds to a polypeptide, which is prepared by immunizing a host animal composition comprising the polypeptide or its fragment which composition comprising the polypeptide or its antigen binding composition comprising the polypeptide or its antigen binding composition comprising the antibody and a carrier, a method of fragment, a composition comprising the composition of actions, a composition comprising the composition of detecting a CA nucleic acid, a method of diagnosing cancer, a composition of a CA nucleic acid, a method of inhibiting expression of a CA nucleic acid in a cell. The CA nucleic acids are useful for detecting CA composition acids. The antibody is useful for detecting the presence or cancer cells in an individual which involves contacting cells from the individual with the antibody and detecting a complex of a CA protein from the cancer cells and the antibody, where the detection of the complex of the complex center when the cancer cells and the antibody, where the detection of the complex center when the cancer cells and the antibody, where the detection of the complex center when the cancer cells and the antibody, where the detection of the complex center when the cancer cells and the antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Best Local

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (vii) as a blochlp; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent US2002182586A1, for which no sequence data was published
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Diagnosis; DNA microarray; microarray; biochip; cancer; neoplasm;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human cancer-associated genomic DNA #63.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    16-JUN-2005

                                                                                                                                        The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vii) for inhibiting the activity of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genee are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent respectation.
                                                                                                                                                                                                                                                                                                                                                                                                                Recombinant nucleic acid useful for diagnosis and treatment of carcinoma comprises a nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cytostatic; carcinoma; lymphoma; cancer; human; gene; ss.

                                                                                                                                                                                                                                                                                                                                                        The invention relates to a method of inhibiting the proliferation of a cancer cell comprises contacting the cell with a semaphorin3B (SEMA3B) polypeptide. The composition and methods are useful in diagnosing or treating cancer. The SEMA3B polypeptide inhibits tumour growth and induces apoptosis in cancer cells. The present sequence represents DNA encoding human semaphorin3B, SEMA3B.

acid molecule for detecting at least one SNP given in the specification, an isolated nucleic comprising at least about 12 contiguous nucleotides, genotyping at least cone SNP position given in the specification in a sample, identifying an individual having or at risk of developing a disorder and a kit comprising at least one containing the detection reagent.

CC Determining whether a trait is linked to one of the human chromosomes or its sub-region comprises determining whether the trait is linked to one or more SNPs using the detection reagent. Senotyping at least one SNP position given in the specification in a sample for allele stated to suppose that differentiates between alternative determining which allele is present at the at least one SNP position. CC determining which allele is present at the at least one SNP position. CC nucleic acid sample from the individual. The disorder is type II diabetes or obesity. The detection reagent is consider, particularly type II diabetes or obesity. This sequence creptesents human genomic DNA used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed consideration but was obtained in electronic format from USPTO at the constraint of the printed constraints.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a detection reagent capable of detecting one more single nucleic acid polymorphisms. The invention also relates to determining whether a trait is linked to one of the human chromosomes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New detection reagent capable of detecting 1, 100, 500, 1000 or 5000 or more single nucleic acid polymorphisms, useful in identifying an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 08-SEP-2000; 2000US-0231397P.

```
CC relational information given in the specification, an isolated nucleic comprising at least about 12 contiguous nucleotides, genotyping at least one SNP position given in the specification in a sample, identifying an comprising at least one container containing the detection reagent. CC comprising at least one container containing the detection reagent. CC comprising at least one container containing the detection reagent. CC its sub-region comprises determining whether the trait is linked to one or more SNPs using the detection reagents. Genotyping at least one containing whether the trait is linked to one co more SNPs using the detection reagents. Genotyping at least one SNP co position given in the specification in a sample comprises contacting the calleles at at least one SNP position given in the specification, and cC determining which allele is present at the at least one SNP position. CC comprises genotyping at least one SNP given in the specification, and cC determining which allele is present at the at least one SNP position. CC comprises genotyping at least one SNP given in the specification in a sample comprise disorder is type II diabetes (non-insulin dependent diabetes) or obesity. The detection reagent is useful in identifying an individual having or at risk of developing a disorder particularly type II diabetes or obesity. This sequence cC represents human genomic DNA used in the scope of the printed consideration but was obtained in electronic format from USPTO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New detection reagent capable of detecting 1, 100, 500, 1000 or 5000 or more single nucleic acid polymorphisms, useful in identifying an individual having or at risk of developing type II diabetes or obesity.
                                                                                                                                                                       Sequence 38684 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     more single nucleic acid polymorphisms. The invention also relates to determining whether a trait is linked to one of the human chromosomes its sub-region, a computer readable medium having stored in it the SNP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a detection reagent capable of detecting one or more single nucleic acid polymorphisms. The invention also relates to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Disclosure; SEQ ID NO 154; 31pp; English.

                                                                                                                                                                                                                                                                                                                                                 The invention relates to a new compound 8-80 nucleobases in length (an antisense oligonucleotide) targeted to a nucleic acid molecule encoding squalene synthase (also known as farnesyl diphosphate farnesyl transferase 1), where the compound specifically hybridises with the nucleic acid molecule encoding human squalene synthase appearing as ADN31611 and inhibits the expression of squalene synthase in cells or tissues, screening for a modulator of squalene synthase, a diagnostic method for identifying a disease state, a kit or assay device comprising the compound and treating an animal having a disease or condition associated with squalene synthase. The compound and methods are useful in diagnosing and treating disorders related to cholesterol biosynthesis e.g. atheroselerosis, coronary heart disease and hypercholesterolaemia. The present sequence is a squalene synthase genomic DNA sequence, a target for the artisense alignmentations.
                                                                  Human; ds; gene; squalene synthase; cholesterol-related disease; cardiovascular disease; chromosome 8.
                                                                                                   Human gene encoding squalene synthase.
                                                                                                                         05-MAR-2003
                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New oligonucleotide targeted to a nucleic acid molecule encoding squalene synthase, useful in diagnosing and treating atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             23-NOV-2002; 2002US-00304125
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     27-MAY-2004

                                                                CC The invention also relates to a peptide array comprising two or more consolated polypeptides encoded by a CA nucleic acid sequence, a compound that binds to a polypeptide, which is prepared by immunizing a host animal CC with a composition comprising the polypeptide or its fragment which the acomposition comprising the polypeptide or its antigen binding CC fragment and collecting cells from the host expressing antibodies against the antibody and a carrier, a method of fragment, a composition comprising the CC antibody and a carrier, a method of ecreening for anticancer activity, a complete acid in a cell. The CA nucleic acid, a method of disgnosing cancer, a cC nucleic acid in a cell. The CA nucleic acids are useful for detecting CA concleic acids. The antibody is useful for detecting the presence or cancer cells in an individual which involves contacting cells from the individual with the antibody, where the detection of the complex correlates with the presence of cancer cells in the composition is useful for inhibiting growth of cancer cells in an individual. The invention is also useful for day agent to cancer cells in an individual. The invention is also useful for day agent to cancer the cell. This sequence represents human cancer-associated genomic DNA of the coll. This sequence represents human cancer-associated genomic DNA of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a nucleic acid array for detecting associated (CA) nucleic acid, comprising two or more nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; SEQ ID NO 669; 198pp; English

```
CC DNA chip analysis as given in the specification, and comparing the expression level to an expression of GCA. Also included are CC differential expression of Gs is indicative of GCA. Also included are CC expression of at least one gene in Gs; (2) screening (M3) for an agent cc expression of at least one gene in Gs; (2) screening (M3) for an agent CC expression of at least one gene in Gs; (2) screening (M3) for an agent cc tissue, an allergic response in a subject, exposure of a subject to a CC pathogen or sterile inflammatory disease using the gene expression CC pathogen or sterile inflammatory disease using the gene expression cc pathogen or sterile inflammatory disease, by detecting the level of expression in a sample of the tissue of gene(s) from Gs, where the level of expression of the gene is indicative of inflammation; (4) treating CC (M5) an inflammation (especially chronic) or in a tissue, an allergic cresponse in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having inflammation with an CC agent that modulates the expression of gene(s) from Gs in the tissue. M1 is useful for detecting an agent capable of modulating GCA preferably in an CC (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation with an CC (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation with an CC (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation with an CC (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile GCA preferably in an Inflammation of the preferably in an Inflammation of the M10 in the tissue, and the control of the M10 in the tissue, and the control of the promoted at the control of the state of the promoted at the control of the state of the control of the state of the control 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

Human genomic sequence hCG40211.

밁 Ś

```
CC mentioned nucleotide sequences, an isolated polypeptide (encoded within CC an open reading frame of a CA sequence selected from any of the 95 CC polynucleotide sequences as mentioned in the specification, or its CC polynucleotide sequences as mentioned in the specification, or its CC complement), an isolated antibody, (or its antigen binding fragment) that binds to the above polypeptide, a hybridoma that produces the above CC monoclonal antibody, a pharmaceutical composition comprising the above CC antibody and a pharmaceutical excipient, a kit for detecting cancer CC cristody and a pharmaceutical excipient, a kit for detecting cancer CC or for detecting the antibody cited above, methods for diagnosing cancer CC individual, a method for inhibiting growth of cancer cells in an CC individual, a method for delivering a therapeutic agent to cancer cells in an individual, a method for thibiting growth of cancer cells in an individual, an electronic library comprising the above CC polynucleotide or polypeptide (or their fragments), methods of screening CC individual, a method for for a bioactive agent capable of modulating CC individual, a method for for a bioactive agent capable of modulating CC individual, a method for for a bioactive agent capable of modulating CC individual, and the composition and methods for detecting cancer CC associated with expression of a polypeptide in a test cell sample, a composition and methods are useful for detecting, diameter in a cell. The composition and methods are useful for detecting,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          14-FEB-2003;

                                                                     diagnosing, preventing and treating cancers, especially lymphoma and leukaemia. These may also be used in screening for agents that modula cancer. The present sequence is a human CAP genomic sequence. Note: I sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WI specification, but was obtained in electronic format directly from WI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             in the specification, or its complement. The nucleic acids encode cancer associated proteins. Also included are an expression vector comprising the isolated nucleic acid cited above, a host cell comprising the above recombinant nucleic acid or expression vector, a microarray for detectif a cancer-associated (CA) nucleic acid comprising at least one probe comprising at least 10 contiguous nucleotides of any of the above-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid comprising at least 10 contiguous nucleotides of any of the 233 polynucleotide sequences given in the specification, or its complement. The nucleic acids encode cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    claim 16; seqid 602; 310pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated cancer-associated polynucleotides and polypeptides useful for diagnosing, preventing or treating cancers, especially lymphoma an leukemia, or in screening for agents that modulate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (SAGR-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   15-DEC-2003;

The sequences are useful for: (1) for screening drug candidates; (ii) for screening of bloactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of bloactive agent capable of modulating the activity of CAP; (iv) for a bloactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating carcinoma; (vii) for nuturalizing the effect of CAP; (ix) as a blochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the
                                                                                                                                                                                                                                                                                                    Human; chronic inflammatory joint disease; infection; tumour; antiinflammatory; cytostatic; antiarthritic; antirheumatic; immunosuppressive; gene therapy; etiological pathogenicity; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             uetermining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent US200218258A31 for which the common of the control of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to are associated with carcinomas. ?
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         01-MAR-2002; 2002US-00087192
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cytostatic; carcinoma; lymphoma; cancer; human; gene; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes a novel reagent for diagnosis, molecular definition and therapy of chronic inflammatory joint diseases, and other inflammatory disorders, infective or tumour diseases in humans. The products of the invention have antiinflammatory, cytostatic, antirheumatic and immunosuppressive activity and can be used for gene therapy. The reagent of the invention and any proteins and cantibodies derived from it, are used (i) for analysing tissue and blood samples for medical diagnosis; (ii) for diagnosis and characterisation of chronic joint diseases, on the basis of molecular characterisation, and determining the etiological pathogenicity principle of as yet uncharacterised inflammatory diseases, also monitoring progression and/or treatment of disease, and optimisation of therapy and (iii) for developing treatments for inflammatory diseases, particularly of joints, infections and tumours. ACA64801-ACA64965 represent human polynucleotides cused in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

 The invention relates to cancer-associated proteins (CAP) and the cancer-associated (CA) nucleic acids encoding them. The invention also relates to a method for treating cancers involving administering to a patient an inhibitor of CAP, and a method of screening for anticancer activity in a potential drug involving providing a cell that expresses a CA gene, contacting a tissue sample derived from a cancer cell with an anticancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Identifying a subject at risk of of polymorphic variations in the which are associated with breast

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 888888888888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ś
                                                        The invention relates to cancer-associated proteins (CAP) and the cancer-
CC associated (CA) nucleic acids encoding them. The invention also relates
CC to a method for treating cancers involving administering to a patient an
CC inhibitor of CAP, and a method of screening for anticancer activity in a
CC contacting a tissue sample derived from a cancer cell with an anticancer
CC contacting a tissue sample derived from a cancer cell with an anticancer
CC drug candidate and monitoring the effect of the anticancer drug candidate
CC on expression of the CA gene. The CAP proteins are useful for detecting
CC cancer associated with expression of a CAP protein in a test cell sample
CC and for screening for a bioactive agent capable of modulating the
CC activity of a CAP protein. The CA nucleic acids are useful for diagnosing
CC cancer, involving determining the expression of a CA nucleic acid in a
CC tissue. This sequence represents a human CA gene of the invention. Note:
CC specification, but was obtained in electronic format directly from WIPO

The CAP proteins are useful for detecting cancer associated with expression of a CAP protein in a test cell sample and for screening for a bioactive agent capable of modulating the activity of a CAP protein. The CA nucleic acids are useful for diagnosing cancer, involving determining the expression of a CA nucleic acid in a tissue. This sequence represents a human CA gene of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel human cancer associated protein encoded within open reading frame of cancer associated gene, useful as targets for diagnosing cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 2004-499109/47
